Cooperating State Departments
of Agriculture

PREFACE

This publication is a summary on the marketing of the 2007 United States Pecan Crop. The information contained in this report was compiled from market reports issued by Federal-State Market News offices operated by the U.S. Department of Agriculture, Agricultural Marketing Service, and the respective State Departments of Agriculture. The following individuals contributed to the narratives found in this publication: Robert J. Corwin, USDA, Thomasville, GA; Marilyn Mayeux, Louisiana Department of Agriculture, Baton Rouge, LA; John Stacy, Texas Department of Agriculture, Austin, TX; Paul Pasholk and Steve Skuba, USDA, Phoenix, AZ.

We gratefully acknowledge the information provided by the Foreign Agricultural Service and the Agricultural Statistics Service of the U.S. Department of Agriculture. We also wish to thank the growers, buyers, shellers, and other segments of the pecan industry for their cooperation in supplying information that made these reports possible.

Additional copies of this summary may be obtained at the cost of \$20.00 each on request from:

MARKETING GEORGIA PECANS - 2007 CROP

PRODUCTION: According to the Georgia Agricultural Statistics Service of the United States Department of Agriculture, Georgia's final 2007 pecan production totaled 150 million pounds, much above the 2006 total of 42 million pounds. Georgia produced approximately 38.93 percent of the national pecan crop (385.3 million pounds) in 2007, making Georgia the country's largest pecan producing state for this season. In 2006, Georgia accounted for approximately 20.3 percent of the national production and 28.5 percent in 2005. Prices received by Georgia growers for 2007 pecans averaged \$1.06 per pound compared to \$1.58 per pound in 2006. Value of the 2007 pecan crop totaled approximately \$159.3 million compared to approximately \$66.3 million in 2006.

GROWING CONDITIONS: The crop was expected to be larger than the 2006 crop due to 2007 being the high year of the alternate bearing cycle. The crop turned out to be one of the largest in many years. Hot, dry weather limited nut size in dry-land orchards but also limited disease and insect damage. The Easter freeze damaged some trees in the eastern part of the state, but the major growing area in the southwest portion of the state was largely unaffected. Although the size of the crop was large, quality was about average compared to that of recent years.

The initial harvest of 2007 crop pecans began in late September in scattered areas of South Georgia on the Pawnee variety in well-managed orchards on irrigated acreage. Shortly thereafter, the gathering of a few additional early maturing varieties was noted and included Creek, Elliott, Moneymaker, Seedling and Stuart. The harvest in Georgia started close to the norm of most years. The limited harvest that occurred did so primarily in well-managed orchards on irrigated acreage. Harvesting in South Georgia remained light into third week of the month when the harvest began to pick up pace. Welcome rain at about this point helped aid shuck release in both South and Middle Georgia. During the last week of the month harvesting activities started to pick up both South Georgia and Middle Georgia but were interrupted by spotty showers. Humid conditions which existed until near the end of the month also made for slower drying of nuts. During this period most deliveries from well-managed orchards were of the Desirable variety with lesser amounts of Elliott, Moneymaker and Schley. Few Stuarts were harvested separately to this point with most going into blends rich in Desirables of a Stuart-Schley mixture. As the month ended, the harvest from both well-managed orchards and yard trees was starting to move at full speed with deliveries of nuts now heavy showing more individual amounts of Stuart and Schley than a week earlier. Over the first two weeks of November, continued dry weather allowed for the harvest to proceed at peak speed. The volume of Desirable lots decreased in number with blends becoming more and more prevalent during this period. Deliveries by growers continued to be heavy until the break for the Thanksgiving Day holiday. By this point some commercial growers were now past 70 percent harvested while others had not yet reached 50 percent. After Thanksgiving, fieldwork was suspended for several days into the next week by a number of rain events. Deliveries of Improved varieties were mostly in the form of machine harvested blends with some Stuart and lesser amounts of Cape Fear, Desirable and Sumner varieties sold on an individual variety basis. As the month ended, harvest operations were proceeding along at a much slower pace due to wet orchard floors brought on from the earlier week rain. Deliveries from well-managed orchards continued to be mostly in the form of machine harvested blends and to a much less extent Stuarts. During the first week of December, harvest continued to be active with favorable weather but harvest volume was noted to be less than before Thanksgiving. By December 11, the harvest was between 70 and 90 percent completed depending on the area of the state. With continued favorable weather, deliveries were fairly heavy during the second and third weeks of the month. By December 20, it was noted that a few producers, located primarily in South Georgia had completed the harvest for the year. Several producers of well-managed orchards took a break from harvest for the period shortly before Christmas until January 2. During that period, harvest from the yard trees of non-managed orchards was moderate to fairly heavy while harvesting activity from well-managed orchards was light to very light. Harvest activities in early January were slowed by rain events around the turn of the year. By January 8, many of the recently harvested lots were showing increasing signs of quality deterioration. This was at least in part due to several rain events of the last few weeks as well as recent damp mornings (which continued to slow harvest in spite of sunny days). Stuarts were particularly hurt by embryo rot, reducing meat yield on that variety. By January 15, deliveries by producers from well-managed orchards were light as more of these growers had completed harvest and sales for the season. Deliveries continued to be moderate from producers of non-managed orchards as cool, dry weather made for favorable harvest conditions. Several rain events starting on Wednesday, January 16, slowed the harvest over the next week with most harvest activity that remained to be done in Middle Georgia. More rain slowed harvest in the week leading up to the end of January. By February 7, harvest from well-managed orchards was very close to completed with harvest from yard trees of non-managed orchards continuing in a very light way into March.

MARKETING GEORGIA PECANS - 2007 CROP

MARKETING: The first significant grower price report on Georgia pecans was issued on October 12 when bids and subsequent purchases were noted. These transactions were for very light volume primary destined for in-shell use or for use by commercial shellers, looking to fill immediate needs. On October 19, transactions were reported for lots suitable for giftpack and fundraising use. Prices again started at traditionally high levels of marketing, fueled by the short crop of the prior year leaving relatively light supplies in cold storage as the season began. Demand was good on lots suitable for giftpack, fundraising uses and in-shell uses and fairly good for supplies suitable only for commercial shelling use during most of October. As the month ended, the harvest was starting to produce fairly heavy deliveries and prices began to fall. This trend of increasingly heavy supplies and demand insufficient to maintain price levels from reporting period to reporting period continued through the first half of November. During this period, some growers opted to store their nuts for future sale rather than sell them on the declining market at hand. On November 20 (just prior to Thanksgiving), prices appeared to be stabilizing and demand improved to a moderate level. On November 27, prices moved slightly higher for the first time in weeks with demand listed as good. With above average demand, prices continued to move higher through the first week of December. Into the third week of the month demand continued to be good to very good with prices about steady of this period. Demand was fairly good to moderate over the remainder of December with prices about steady. The next shift in price was noted on January 8 with machine harvested blends. On January 15, prices were reported slightly lower for yard tree lots of Moneymakers and Seedlings. Demand improved to good on January 17 and remained between good and fairly good for the remainder of the reporting season which ended on February 7. Prices for machine harvested blends rose as the season neared completion.

Prices for yard tree lots of Seedlings fell from an initial high of 60-75 cents per pound, settling between 45-60 cents per pound for most of the season. Prices for yard tree lots of Stuarts of generally good quality sold at the start of the season in a range of 90 cents to \$1.10 per pound but spent most of the season in a range between 60 to 85 cents per pound mostly 60-70 cents per pound.

Lots of Desirables of good quality and larger volume (over 20,000 pounds) saw prices range between \$1.10-1.83 per pound over the season with lowest prices during the peak November harvest. Smaller (less than 20,000 pounds) lots of good quality brought between \$1.05-1.78 per pound over the course of the season, again showing lowest prices during the peak November harvest. Stuart, for lots of good quality, had prices range between \$0.81-1.50 per pound over the course of the season again bottoming out in November.

Prices for machine harvested blends (lots containing a mixture of two or more varieties) of good quality in large lots (20,000 pounds or more) sold in a range of \$1.85-\$3.40 per point but mostly \$1.85-2.15 per point during the peak of the harvest. Smaller lots (less than 20,000 pounds) of good quality blends sold in a range of \$1.70-3.40 per point but mostly \$1.70-2.10 per point during the peak of the harvest. "Blends" were primary purchased on a meat yield-meat cost basis, dollars per percentage point of edible kernel.

MARKETING LOUISIANA PECANS - 2007 CROP

PRODUCTION: According to the Louisiana Agricultural Statistics Service, the 2007 Louisiana pecan crop totaled 14 million pounds, which is 7 million pounds less than the 2006 crop and 9 million pounds more than the 2005 pecan crop. Native pecans in 2007 comprised approximately 78.6 percent of the total compared with 83.3 percent in 2006 with Improved varieties comprising the remainder of the crop in each year. The average price received by producers for the 2007 crop was \$.807 per pound, compared to the 2006 average of \$.983 per pound. The overall value of the 2007 crop totaled approximately 11.30 million dollars compared with the 2006 value of approximately 20.65 million dollars.

GROWING CONDITIONS AND HARVEST: The initial harvest of the Louisiana pecan crop took place in mid October in mostly the south and central areas of the state. Growing conditions in June and July were wetter than normal with August until the start of the harvest in mid October on the dry side. The harvest proceeded along normally thereafter. On November 11, the Louisiana Agricultural Statistics Service estimated the harvest at 69 percent completed and by December 3 the harvest was 85 percent completed. The remainder of the crop was harvested over the next eight weeks with harvesting very close to completed when price reporting ceased on January 31.

MARKETING: Price reporting for Native pecans began on October 25 with sales of yard tree lots (less than 1,000 pounds) of good quality paying growers 60 cents per pound. Prices in November fell to as low as 40 cents per pound and remained between 40 and 45 cents per pound for the remainder of the reporting season, which was completed on January 31.

MARKETING OKLAHOMA PECANS - 2007 CROP

PRODUCTION: According to the Oklahoma Agricultural Statistics Service, Oklahoma in 2007 produced 30 million pounds of pecans as compared with 17 millions pounds for 2006 and 21 million pounds for 2005. Oklahoma accounted for 7.8 percent of the nation's total production and 32.5 percent of the nation's Native production. In comparison for 2006, Oklahoma accounted for 8.2 percent of the nation's total production and 21.8 percent of the nation's Native production. In 2005, Oklahoma accounted for 7.5 percent of the nation's total production and 29.1 percent of the nation's Native production. Average price per pound was \$.90, much lower than the \$1.31 per pound received in 2006 and the \$1.40 per pound received in 2005. Value of production was estimated at \$27 million, above the \$22.3 million for 2006 but below the \$29.4 million for 2005.

GROWING CONDITIONS AND HARVEST: Weather conditions in Oklahoma were variable during the 2007 growing season. Freezing temperatures of extended duration primarily in northern areas occurred April 5-10 as shoots were developing. Temperatures prior to the freeze generally were above normal. Coldest temperatures with the longest duration below freezing were recorded generally above the path of Interstate 40. Production in Northern Oklahoma locations was greatly reduced with some areas losing the crop. Production in Southern Oklahoma was heavy though, consistent with an on-year crop. Frequent heavy rains fell during the summer hampering field work and maintenance. Producers in some areas noted a higher than normal degree of pecan scab and defoliating pests. Delivered quality for Natives generally ranged 36-40 percent meat yield for small yard lot volume and 40-42 percent meat yield for larger machine picked lots. Trade sources noted, depending upon area, a higher than normal degree of high unit counts and lightweight nuts. Harvesting began in early to the middle of November but became active later in the month when colder, below freezing temperatures aided shuck split, tree defoliation and nut drop. Rain fell throughout Oklahoma late in the week of December 2 and early in the week of December 9 causing growers to curtail harvesting. Harvesting generally resumed by late in the week of December 16. Weather conditions improved for the balance of the season, although scattered precipitation fell in early January slowing harvest. By January 17, trade sources estimated harvesting to be 75-80 percent complete and 90 percent complete by January 24. Harvesting was generally complete on machine harvested acreage by the end of January.

MARKETING: Lots in excess of 20,000 pounds were sold on an in-shell dollars per point basis while smaller lots were generally sold on an in-shell cents per pound basis. Natives were primarily marketed along with a lighter than normal volume of Stuarts and other improved varieties. The first reported Oklahoma pecan grower prices were on November 15. Prices paid for Natives in-shell in lots of 5000 pounds or more 40-42 percent meat yield were \$.60-.62 mostly \$.60 per pound, while lots of 1000 pounds or less 36-40 percent meat yield ranged \$.45-.50 per pound. The market declined by November 29 to \$.50-.60 per pound on lots of 5000 pounds or more and \$.35-.45 per pound on lots less than 1000 pounds. Prices rose December 20 to \$.55-.60 per pound on lots of 5000 pounds or more and \$.45-.50 per pound on lots of 1000 pounds or less. The market declined on lots of 5000 pounds or more on January 8 to \$.50-.60 per pound and on lots of less than 1000 pounds on January 17 to \$.40-.50. The market remained unchanged for the balance of the reported season.

Prices for Natives in lots in excess of 20,000 pounds sold on an in-shell dollars per point basis and were first reported November 27 with 40-42 percent meat yield quality reported at \$1.60-1.70 per point. The market rose by December 11 to \$1.70-1.80 per point and again December 20 to \$1.70-2.00 mostly \$1.80-1.90 per point before declining to \$1.75-1.85 per point on December 27. Prices declined January 3 to \$1.60-1.75 mostly \$1.75 per point and January 8 to \$1.60-1.70 per point. Prices were slightly lower January 10 at \$1.60-1.70 mostly \$1.60-1.65 per point. Prices rose by January 31, the final reporting day, to \$1.70-1.80 mostly \$1.70-1.75 per point.

MARKETING TEXAS PECANS – 2007 CROP NORTH, CENTRAL AND SOUTHERN AREAS

PRODUCTION: According to the Texas Agricultural Statistics Service, Texas's final 2007 pecan production totaled 70 million pounds, considerably more than the 2006 crop total of 47 million pounds, and slightly more than the 2005 crop total of 65 million pounds. Texas accounted for approximately 18.2 percent of the nation's total production compared to approximately 22.7 percent in 2006. For Improved varieties, Texas accounted for approximately 14.6 percent of the nation's total production as compared to approximately 21.7 percent in 2006. Prices received by growers throughout the United States for 2007 averaged \$1.13 per pound, a significant decrease from the \$1.56 average for 2006. Prices received by growers in Texas for 2007 pecans averaged \$1.11 per pound well below the \$1.60 average for 2006. Value of production in 2007 was estimated at \$77.6 million as compared with \$75.31 million in 2006 and \$95.85 million in 2005.

GROWING CONDITIONS: The 2007 season proved to be about average. With the short crop of 2006 Texas producers were hoping for a better than average year. Growing conditions did improve and better yields followed. Periodic rains in July helped to increase the yields and improve quality. Rain and warm weather in September delayed harvest but overall did not hurt the quality of nuts offered.

HARVEST: Harvesting started in late September due to warm wet weather. Overall, the harvest went smoothly with most buyers waiting to sell their crop until the Georgia crop was sold.

QUALITY: The 2007 production year produced an excellent nut crop. The overall quality of the large crop was considered above average.

MARKETING: The first price report of the 2007 pecan season was released on October 18, 2007. The final report was issued on January 17, 2008. Prices were largely affected by the heavy crop in Georgia with prices on average lower than in 2006. Demand was good early in the season but became light as Georgia pecans flooded the market in November. Demand remained light to very light for the rest of the reporting season. Prices for Natives in small volume lots ranged from 45-52 cents per pound in mid November to 62-74 cents per pound as the season neared completion in mid January. The Wichita variety sold from \$1.70-1.90 per pound in late October but fell to \$1.15-1.30 per pound by mid November in response to the heavy crop of Improved varieties nationally. The Desirables reported started harvesting in early November and were finished by early December with prices starting as high as \$1.67 per pound and falling as low as \$1.15 per pound.

**MARKETING WESTERN IRRIGATED REGION
(ARIZONA, NEW MEXICO AND WEST TEXAS) PECANS – 2007 CROP**

PRODUCTION: According to the New Mexico Agricultural Statistics Service, New Mexico's final 2007 pecan production totaled 74 million pounds as compared with 47 million pounds for 2006 and 65 million pounds for 2005. New Mexico accounted for approximately 19.2 percent of the nation's total production and approximately 24.5 percent of the nation's Improved variety production. This was below the 22.7 percent of nation's total production accounted for in 2006 by New Mexico and below the 30.9 percent of the nation's 2006 Improved variety production. Average price paid per pound to New Mexico's growers was \$1.30 as compared with \$1.85 per pound in 2006 and \$1.70 per pound in 2005. Value of production was estimated at \$96.2 million for 2007 above the approximate \$87.0 million for 2006 and below the approximate \$110.5 million in 2005.

According to the Arizona Agricultural Statistics Service, Arizona's final pecan production totaled 23 million pounds for 2007 compared with 14 million for 2006 and 22 million pounds for 2005. Arizona produced approximately 6.0 percent of the nation's total production and approximately 7.6 percent of the nation's Improved variety production in 2007. The percentage of the nation's total production was below 2006 when Arizona accounted for about 6.8 percent of the nation's production of all varieties. The percentage of the nation's Improved variety production was less than the approximate 9.2 percent from 2006. Average price paid per pound to Arizona's growers was \$1.60 for 2007 below the \$1.75 averaged in 2006 and the same as the \$1.60 averaged in 2005. Value of production in 2007 was estimated at \$36.8 million as compared with \$24.5 million in 2006 and \$35.2 million in 2005.

See Texas narrative (page 19) for production data from that state.

GROWING CONDITIONS AND HARVEST: The weather over the growing season was variable with frequent rainfall late in the summer and average temperatures near or above normal. In areas of early nut drop and low nut bearing trees, harvesting began in mid December, later than normal as temperatures were unseasonably warm with a lack of freezing morning temperatures and frequent precipitation. Quality was variable, with some embryo rot, sprouting, and kernel discoloration present during much of the harvesting season. Delivered quality generally averaged 54 percent meat yield or better for large lots in excess of 20,000 pounds and 52 per cent meat yield or better for small lots less than 5,000 pounds. Harvesting generally began in mid December and was very active by late in the week of December 27 when low temperatures dipped below freezing, and orchard floors and pecans generally dried out. Weather conditions for the season were generally favorable for harvesting with limited precipitation. Trade sources estimated harvesting to be 80 percent complete by January 17 and 80-90 percent complete by January 24. Harvesting was generally complete by February 7, later than normal. Growers early in the season were reluctant to market harvested supplies but rather accumulated supplies allowing nuts to dry to acceptable moisture levels. Many growers marketed their crop after mid January. A number of growers utilized cold storage facilities in order to market their crop at a later time in the year, and for the growing export market, especially to China.

MARKETING: Lots in excess of 20,000 pounds, mostly truckloads lots of 40,000 pounds, were sold on an inshell dollars per point basis, while smaller lots were generally sold inshell cents per pound or seller's choice. The Western Schley was the prevalent improved variety marketed. The first reported prices for truckload lots in excess of 20,000 pounds were on December 18 when lots of 55 percent or better meat yield quality were sold at \$2.40-2.45 per point. Prices rose by December 27 to \$2.40-2.60 per point. Prices fell by January 3 to \$2.25-2.30 per point, and fell further by January 8 to \$2.00-2.30 per point. Prices rose slightly by January 17 to \$2.10-2.35 per point. Higher prices were reported by January 24 at \$2.25-2.50 per point, by January 31 at \$2.50-2.75 per point, and rose by February 7 to \$2.60-2.80 per point, the final report of the season.

Prices for lots of less than 1000 pound were first reported December 20 when lots of 52 percent or better meat yield quality were sold at \$0.70-1.00 per pound. The market rose to mostly \$1.00 per pound by December 27. The market fell to \$0.50-1.00 per pound by January 3. The market rose to \$0.70-1.00 per pound by January 8. Prices generally remained within that range for the rest of January, rising to mostly \$0.90-1.10 per pound by February 7, the final report of the season.
